

PHENOMENA, DRIVING QUESTIONS AND STORYLINE

ECOLOGY

How and why do organisms interact with their environment and what are the effects of these interactions?

Phenomenon	Driving Questions	Guiding Questions	Activities	PE	Storyline/Flow
<p>People have introduced many kinds of species into new ecosystems either on purpose or accidentally, and they can cause problems for both people and the environment.</p>	<p>What are the effects of introduced species, and what can be done about them?</p>	<p>How have introduced Nile perch changed Lake Victoria? What are the trade-offs of introducing Nile perch into this environment? (Activity 1)</p> <p>What effect can an introduced species have on an environment? What, if anything, can or should be done to control introduced species? (Activity 2)</p>	<p>1, 2 (15, 16)</p>	<p>MS-LS2-4 MS-LS2-5 ETS1.A ETS1.B</p>	<p>Does this happen elsewhere? GO TO ACTIVITY 2</p> <p>Students research such a species, but in order to understand that research, they need to learn about Ecology. GO TO ACTIVITY 3</p>
<p>There are different organisms and different numbers of organisms in different places.</p>	<p>Why are certain species more common than others, and why do some species become more common over time?</p>	<p>What patterns do you detect in the two environments, and how might the information in these patterns be helpful to scientists? (Activity 3)</p> <p>What patterns do you observe when you investigate your own environment, and what might be causing these patterns? (Activity 4)</p> <p>How do the habitat requirements of individual organisms determine where a species will be found in nature? (Activity 5)</p> <p>Do zebra mussel populations change or stay the same in their native range? (Activity 6)</p>	<p>3, 4, 5, 6</p>	<p>MS-LS2-1 MS-LS2-2 MS-LS2-4</p>	<p>How can we look for and detect patterns in the living environment? Transects are one method. GO TO ACTIVITY 4</p> <p>These differences occur everywhere, including one's own backyard/school grounds, and we can use the transect method, too. GO TO ACTIVITY 5</p> <p>Populations are found in places that have the right kind of features in the environment. GO TO ACTIVITY 6</p> <p>Populations fluctuate in size, and determining the causes for those changes is an important question in ecology. GO TO ACTIVITY 7</p>

Phenomenon	Driving Questions	Guiding Questions	Activities	PE	Storyline/Flow
<p>A variety of species tend to be found together and linked through feeding relationships.</p>	<p>How do different species in the same ecosystem interact with each other and with the physical environment?</p>	<p>What is an owl's place and role in a food web? (Activity 7)</p> <p>How do matter and energy move in an ecosystem? (Activity 8)</p> <p>How does the availability of food affect a population? (Activity 9)</p> <p>How do interactions with living or non-living factors in ecosystems affect populations? (Activity 10)</p> <p>How does a new species affect the flow of energy and movement of matter through an ecosystem? (Activity 11)</p> <p>What is the role of decomposers in the cycling of matter in an ecosystem? (Activity 12)</p>	<p>7, 8, 9, 10, 11, 12</p>	<p>MS-LS2-3 MS-LS2-1 MS-LS2-2</p>	<p>What an organism eats helps ecologists understand their role in an ecosystem. GO TO ACTIVITY 8</p> <p>We can look at what all the organisms in an ecosystem eat and connect them through energy and matter relationships. GO TO ACTIVITY 9</p> <p>When a population's prey increases in abundance, its size may grow; when its prey is scarce, its size may decrease. GO TO ACTIVITY 10</p> <p>There are patterns to the ways organisms interact in an ecosystem, and these patterns occur in all ecosystems. GO TO ACTIVITY 11</p> <p>Decomposers break down dead organisms and return the matter to the environment. GO TO ACTIVITY 12</p> <p>Ecologists can use models to try to predict the impact of an introduced species. GO TO ACTIVITY 13</p>

PHENOMENA, DRIVING QUESTIONS AND STORYLINE

ECOLOGY (continued)

How and why do organisms interact with their environment and what are the effects of these interactions?

Phenomenon	Driving Questions	Guiding Questions	Activities	PE	Storyline/Flow
Physical and biological factors can disrupt an ecosystem to a small or large degree.	What happens to organisms and relationships among them when an ecosystem is disrupted?	How can an abiotic disruption such as fire affect the flow of energy and cycling of matter in an ecosystem? (Activity 13) What do the scientific data tell you about how the Hudson River changed after introduction of the zebra mussel? (Activity 14)	13, 14	MS-LS2-4	Physical disruption can impact the flow of energy and cycling of matter in an ecosystem. GO TO ACTIVITY 14 Ecologists have a large amount of data to examine the effects of Zebra Mussels; students will examine these same data. GO TO ACTIVITY 15
People have introduced many kinds of species into new ecosystems either on purpose or accidentally, and they can cause problems for both people and the environment.	What are the effects of introduced species, and what can be done about them?	How can an invasive species be controlled or eliminated? (Activity 15) What effect can certain introduced species have on an environment? What, if anything, can or should be done to control these species? (Activity 16)	(1, 2) 15, 16	MS-LS2-5 MS-LS2-4 ETS1.A ETS1.B	How can we look for and detect patterns in the living environment? Transects are one method. GO TO ACTIVITY 16 These differences occur everywhere, including one's own backyard/school grounds, and we can use the transect method, too. GO TO ACTIVITY 1
